

Nursing Informatics Competencies

Thank you for your interest in our survey!

This is a survey to update the „**International Recommendation Framework of Core Competencies in Health Informatics for Nurses**“ of 2018. We are an international group of nursing and health informaticians who set out almost 10 years ago to investigate the educational needs of nurses in their various role regarding making patient care better in the new digital world. The Recommendation Framework of 2018 consists of relevance ratings for core competency areas and case studies how these competencies were put into practice.

With your support, we would like to update this Recommendation Framework.

Where to find the questionnaire?
